

Electric Grand 70BXL

Wavetable Expansion for Crumar Seven

EXPANSION CONTENT

This free wavetable expansion for the Crumar Seven features the sampling of a gorgeous Yamaha CP70B owned by Italian Youtuber "Marcoballa". This particular piano was completely restored and re-strung in 2018 by some of the best piano technicians in Milan, Italy.

The sampling process took place in October 2021 by GSi using a custom piano sampling robot that ensures a precise velocity response across the entire keyboard. The result is a total of 429 MB worth of sampled material for 316 samples, with velocity layers ranging from 12 to 6 per key according to the key zone. Samples are not looped, so the natural decay of the instrument has been preserved.

The recording has been done using the line-out only with just a bit of EQ correction and no further processing.

INSTALLING THE SAMPLE CONTENT

First thing: make sure you have the latest firmware installed.
This expansion requires firmware version 1.30 or greater.

DO NOT ATTEMPT TO INSTALL THIS EXPANSION ON AN OLDER FIRMWARE. Chances are that the installation will fail or, in the worst scenario, your Seven sample memory may be corrupted.

If you're unsure, go the Crumar website and check the Support section.

Copy all the content of the folder **ElectricGrand70BXL** onto the root of a blank USB Memory Stick, then safely remove the USB Memory from your computer and connect it to the **SYSTEM USB** port of your Seven. Connect to the Seven Editor and go to the Editor's home page, then click/tap the **INSTALL NEW** button that you find in the **WAVETABLE EXPANSIONS** section.

BEWARE: The installation may take up to 25~30 seconds, during which the interface shows a "please wait" screen. Just wait, don't quit the editor, don't extract the USB memory, don't click/tap any link, and don't play the instrument. At the end of the process the editor page should automatically reload.

HOW TO FIND THE NEW SAMPLE CONTENT

Go to the **SELECT PIANO** page of the Editor. The new sample content is appended at the bottom of the list. In case you don't find it, try to reload the editor page. Of course, it is possible to use this content to create your own sounds.

FINAL NOTE

No presets are provided with this expansion. Select an Init preset from the PRESETS page, then go the SELECT SOUND page, click the GSP-01 Sample Player box and scroll down until you find the new sample sets, select the one you wish to play, then add effects at your taste. Finally, get back to the PRESET page, give your preset a new name and a brief description, then click STORE.
